#### Como criar o roxo?

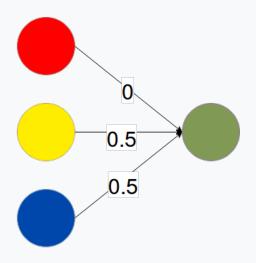

#### Como criar o roxo?

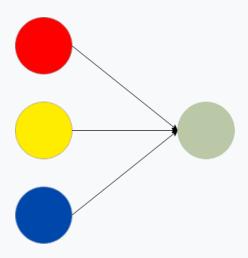

#### Como criar o verde?

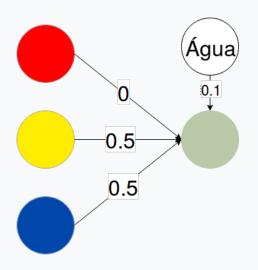

#### Como criar o verde?

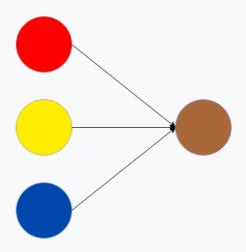

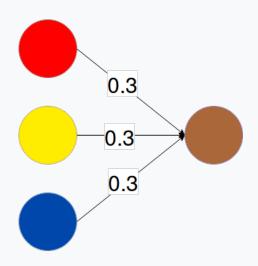

# Como fazer o verde transparente?

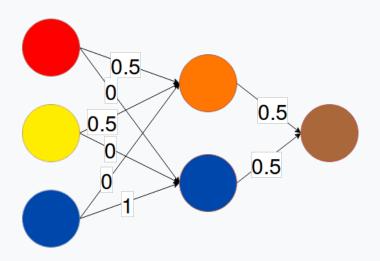

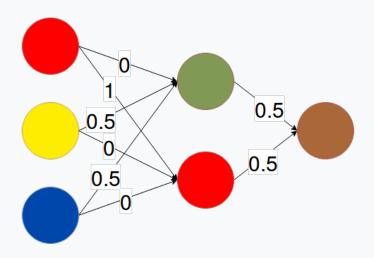

## Como fazer o verde transparente?

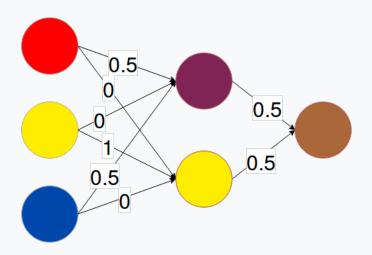

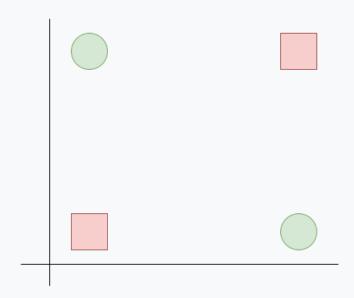

# Operador XOR

## Entradas e saídas

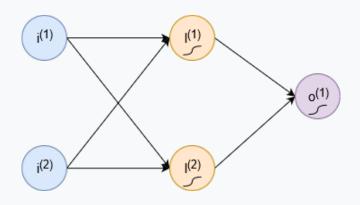

$$\mathbf{x} = \begin{bmatrix} 1 \\ 0 \end{bmatrix}$$

$$\mathbf{y} = \begin{bmatrix} \mathbf{1} \end{bmatrix}$$

## Aprenizado = minimizar "loss"

$$\underset{\theta}{\operatorname{argmin}} \mathcal{L}(\hat{\mathbf{y}}, \mathbf{y}; \theta) = \frac{1}{2m} \Sigma_m (\mathbf{y} - \hat{\mathbf{y}})^2$$

# Rede proposta

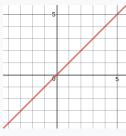

## Computações

$$\mathbf{l}^{(1)} = \sigma(\theta^{(1)}\mathbf{i} + \mathbf{b})$$

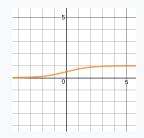

$$\mathbf{l}^{(\mathtt{2})} = \sigma(\theta^{(\mathtt{2})}\mathbf{i} + \mathbf{b})$$

$$\mathbf{o}^{(1)} = \sigma(\theta^{(3)}\mathbf{l} + \mathbf{b})$$

### Não linearidades

(a) Linear:  $\mathbf{y} = \theta \mathbf{x} + \mathbf{b}$ 

(b) Sigmóide: 
$$\sigma(\theta \mathbf{x} + \mathbf{b}) = \frac{1}{1 + e^{-(\theta \mathbf{x} + \mathbf{b})}}$$

#### **Gradient Descent**

Repete até convergir:  $\theta_j := \theta_j - \alpha \frac{\partial}{\partial \theta_j} \mathcal{L}$
